250 INSTALLATION

- Programming: Do not install cubicles or duct wall panels until the building is weathertight, wet trades have completed their work, wall and floor finishes are complete and the building is dried out.
- Modifications: Do not cut, plane or sand prefinished components.
- Fixing: Secure components using fasteners and methods recommended by the cubicle manufacturer, to prevent bowing or other distortion of frames, panels and doors.
- Moisture and movement: Make adequate allowance for future movement.
